To Whom it May Concern,

I am the Manager of an arts & cultural facility in Meaford. We present more than 100 performances annually from live music, films, and events. Two years ago, we were researching some high-tech opportunities to promote coming events to Meaford Hall. We spoke with the staff at Taylor Electronics and they suggested we consider a new product which would suit our needs and grow with us in the future- digital sign boards.

Taylor's took the time to meet with us numerous times to discuss our current and future needs. Their assistance was invaluable as they explained thoroughly all of the opportunities that might be presented now and in the future.

We purchased three digital outlets and placed them strategically throughout our building. The TES technician was always available to help trouble-shoot during the initial setup phase. We now have the three programs running constantly and they have been extremely effective.

Recently, other municipal departments decided to utilize our server and five more units were purchased. Again the support from TES has been top-notch – getting us up and running within a few days.

We have always found working with TES provides us with fantastic customer support and superior quality products. They stand behind and service what they sell. This is extremely important to a venue such as ours which cannot tolerate any down time.

Sincerely,

Susan Lake,
Manager Arts & Cultural Services
Meaford, ON
